Molecular Functions
structural constituent of ribosome
proton transmembrane transporter activity
oxidoreduction−driven active transmembrane transporter activity
electron transfer activity
cytochrome−c oxidase activity
primary active transmembrane transporter activity
oxidoreductase activity, acting on a heme group of donors
rRNA binding
ubiquitin ligase inhibitor activity
ubiquitin−protein transferase inhibitor activity
active ion transmembrane transporter activity
ubiquitin−protein transferase regulator activity
active transmembrane transporter activity
proton−transporting ATP synthase activity, rotational mechanism
proton channel activity
ribonucleoprotein complex binding
mRNA 5'−UTR binding
MDM2/MDM4 family protein binding
isomerase activity
mRNA binding
