Molecular Functions
actin binding
electron transfer activity
transmembrane transporter binding
iron−sulfur cluster binding
metal cluster binding
actin filament binding
calmodulin binding
oxidoreduction−driven active transmembrane transporter activity
NADH dehydrogenase activity
tubulin binding
NADH dehydrogenase (ubiquinone) activity
NADH dehydrogenase (quinone) activity
microtubule binding
NAD(P)H dehydrogenase (quinone) activity
oxidoreductase activity, acting on the CH−CH group of donors
phosphatase binding
structural constituent of cytoskeleton
2 iron, 2 sulfur cluster binding
phosphoric ester hydrolase activity
sulfur compound binding
