Molecular Functions
actin binding
electron transfer activity
actin filament binding
calmodulin binding
iron−sulfur cluster binding
metal cluster binding
oxidoreduction−driven active transmembrane transporter activity
transmembrane transporter binding
oxidoreductase activity, acting on the CH−CH group of donors
protein serine/threonine kinase activity
NADH dehydrogenase activity
2 iron, 2 sulfur cluster binding
cell adhesion molecule binding
tubulin binding
NADH dehydrogenase (ubiquinone) activity
NADH dehydrogenase (quinone) activity
sulfur compound binding
NAD binding
NAD(P)H dehydrogenase (quinone) activity
structural constituent of cytoskeleton
