Molecular Functions
structural constituent of ribosome
mRNA binding
ribonucleoprotein complex binding
rRNA binding
ubiquitin protein ligase binding
translation regulator activity
unfolded protein binding
ubiquitin−like protein ligase binding
transcription coregulator activity
translation factor activity, RNA binding
translation regulator activity, nucleic acid binding
translation initiation factor activity
transcription coactivator activity
mRNA 5'−UTR binding
RNA polymerase II−specific DNA−binding transcription factor binding
actin binding
ribosome binding
protein folding chaperone
5S rRNA binding
cyclosporin A binding
