Molecular Functions
cell adhesion molecule binding
phosphoric ester hydrolase activity
phosphatase activity
magnesium ion binding
actin binding
calmodulin binding
NAD binding
actin filament binding
phospholipid binding
small GTPase binding
GTPase binding
structural constituent of cytoskeleton
protein serine/threonine kinase activity
nucleoside−triphosphatase regulator activity
GTPase regulator activity
number of genes
20
40
60
microtubule binding
p.adjust
1.0e−05
7.5e−06
5.0e−06
2.5e−06
lyase activity
transcription coregulator activity
tubulin binding
flavin adenine dinucleotide binding
acyl−CoA dehydrogenase activity
oxidoreductase activity, acting on the CH−CH group of donors
electron transfer activity
metal cluster binding
fatty−acyl−CoA binding
fatty acid derivative binding
iron−sulfur cluster binding
2 iron, 2 sulfur cluster binding
protein kinase A binding
transmembrane transporter binding
