Molecular Functions
magnesium ion binding
phosphatase binding
structural constituent of cytoskeleton
2 iron, 2 sulfur cluster binding
metal cluster binding
actin filament binding
iron−sulfur cluster binding
oxidoreductase activity, acting on the CH−CH group of donors
electron transfer activity
fatty−acyl−CoA binding
actin binding
flavin adenine dinucleotide binding
acyl−CoA dehydrogenase activity
number of genes
10
20
30
40
50
60
protein C−terminus binding
transmembrane transporter binding
p.adjust
8e−06
6e−06
4e−06
2e−06
lyase activity
protein kinase A binding
calmodulin binding
transcription coregulator activity
protein serine/threonine phosphatase activity
microtubule binding
phospholipid binding
phosphatase activity
tubulin binding
phosphoric ester hydrolase activity
GTPase regulator activity
small GTPase binding
GTPase binding
protein serine/threonine kinase activity
nucleoside−triphosphatase regulator activity
