Molecular Functions
structural constituent of ribosome
transcription coregulator activity
small GTPase binding
phosphatase binding
ubiquitin protein ligase binding
GTPase binding
actin binding
ubiquitin−like protein ligase binding
protein phosphatase binding
ubiquitin−like protein transferase activity
GTPase regulator activity
nucleoside−triphosphatase regulator activity
GTP binding
guanyl nucleotide binding
guanyl ribonucleotide binding
phosphatidylinositol binding
protein phosphatase regulator activity
histone binding
ubiquitin−protein transferase activity
phosphatidylinositol phosphate binding
