Molecular Functions
metal cluster binding
actin binding
iron−sulfur cluster binding
electron transfer activity
2 iron, 2 sulfur cluster binding
protein tyrosine/serine/threonine phosphatase activity
ribonucleoprotein complex binding
mRNA 3'−UTR binding
ubiquitin−protein transferase activity
basal RNA polymerase II transcription machinery binding
mRNA binding
ubiquitin−like protein transferase activity
SMAD binding
basal transcription machinery binding
number of genes
10
20
30
muscle alpha−actinin binding
p.adjust
0.0015
0.0010
0.0005
protein methyltransferase activity
tubulin binding
transcription coregulator activity
ubiquitin−like protein ligase binding
N−methyltransferase activity
ubiquitin protein ligase binding
Hsp70 protein binding
ion channel inhibitor activity
potassium channel inhibitor activity
molecular function inhibitor activity
channel inhibitor activity
dynein complex binding
RNA polymerase II−specific DNA−binding transcription factor binding
ion channel regulator activity
channel regulator activity
