Molecular Functions
actin filament binding
GTPase binding
protein phosphatase binding
single−stranded DNA binding
phosphatase binding
actin binding
translation factor activity, RNA binding
SMAD binding
translation regulator activity, nucleic acid binding
translation regulator activity
protein−macromolecule adaptor activity
rRNA binding
structural constituent of ribosome
ribonucleoprotein complex binding
number of genes

1e−04
magnesium ion binding
ubiquitin protein ligase binding
transcription coactivator activity
proton transmembrane transporter activity
ubiquitin−like protein ligase binding
RNA polymerase II−specific DNA−binding transcription factor binding
mRNA binding
transcription coregulator activity
GTPase regulator activity
protein folding chaperone
nucleoside−triphosphatase regulator activity
snoRNA binding
guanyl nucleotide binding
guanyl ribonucleotide binding
unfolded protein binding
GTP binding
