Molecular Functions
actin binding
electron transfer activity
tubulin binding
oxidoreductase activity, acting on the CH−CH group of donors
protein serine/threonine kinase activity
iron−sulfur cluster binding
metal cluster binding
phosphoric ester hydrolase activity
calmodulin binding
actin filament binding
microtubule binding
transmembrane transporter binding
GTPase binding
phosphatase activity
GTPase regulator activity
nucleoside−triphosphatase regulator activity
flavin adenine dinucleotide binding
protein kinase A binding
phospholipid binding
magnesium ion binding
