Molecular Functions
structural constituent of ribosome
mRNA binding
unfolded protein binding
rRNA binding
ribonucleoprotein complex binding
translation regulator activity
ubiquitin protein ligase binding
ubiquitin−like protein ligase binding
translation regulator activity, nucleic acid binding
translation factor activity, RNA binding
transcription coregulator activity
translation initiation factor activity
transcription coactivator activity
mRNA 5'−UTR binding
actin binding
protein folding chaperone
snRNP binding
ribosome binding
translation initiation factor binding
peptidyl−prolyl cis−trans isomerase activity
