Molecular Functions
structural constituent of ribosome
transcription coregulator activity
actin binding
histone binding
ribonucleoprotein complex binding
ubiquitin−like protein transferase activity
protein C−terminus binding
ubiquitin protein ligase binding
ubiquitin−like protein ligase binding
phosphatase binding
GTPase regulator activity
nucleoside−triphosphatase regulator activity
RNA polymerase II−specific DNA−binding transcription factor binding
actin filament binding
GTPase binding
GTP binding
small GTPase binding
transcription coactivator activity
guanyl nucleotide binding
guanyl ribonucleotide binding
