Molecular Functions
molecular adaptor activity
SH3 domain binding
protein−macromolecule adaptor activity
alpha−actinin binding
protein tyrosine kinase binding
extracellular matrix structural constituent
transmembrane transporter binding
ankyrin binding
histone−lysine N−methyltransferase activity
nuclear receptor binding
structural constituent of cytoskeleton
ubiquitin−like protein ligase binding
protein serine/threonine kinase activity
RNA polymerase II−specific DNA−binding transcription factor binding
actin filament binding
transcription coactivator activity
mRNA binding
SMAD binding
actin binding
transcription coregulator activity
protein kinase A binding
microtubule plus−end binding
transcription corepressor activity
protein C−terminus binding
integrin binding
tubulin binding
cell adhesion molecule binding
small GTPase binding
GTPase binding
double−stranded RNA binding
