Molecular Functions
heat shock protein binding
translation regulator activity
translation factor activity, RNA binding
translation regulator activity, nucleic acid binding
translation initiation factor activity
translation initiation factor binding
mRNA 5'−UTR binding
mRNA 3'−UTR binding
structural constituent of ribosome
transcription coactivator activity
mRNA binding
actin binding
snRNP binding
transcription coregulator activity
rRNA binding
5S rRNA binding
number of genes
25
50
75
p.adjust
6e−06
4e−06
2e−06
ubiquitin−like protein ligase binding
protein N−terminus binding
protein folding chaperone
cyclosporin A binding
ubiquitin protein ligase binding
peptidyl−prolyl cis−trans isomerase activity
unfolded protein binding
cis−trans isomerase activity
ubiquitin ligase inhibitor activity
ubiquitin−protein transferase inhibitor activity
RNA polymerase II−specific DNA−binding transcription factor binding
ribosome binding
ribonucleoprotein complex binding
transcription regulator inhibitor activity
