Molecular Functions
structural constituent of ribosome
proton transmembrane transporter activity
actin monomer binding
primary active transmembrane transporter activity
actin binding
rRNA binding
proton−transporting ATP synthase activity, rotational mechanism
fibronectin binding
oxidoreduction−driven active transmembrane transporter activity
active transmembrane transporter activity
proton channel activity
NADH dehydrogenase (ubiquinone) activity
NADH dehydrogenase (quinone) activity
heparin binding
NADH dehydrogenase activity
NAD(P)H dehydrogenase (quinone) activity
electron transfer activity
mRNA binding
actin filament binding
cell adhesion molecule binding
