Molecular Functions
GTPase binding
small GTPase binding
phosphatidylinositol binding
phospholipid binding
tubulin binding
microtubule binding
protein serine/threonine kinase activity
cell adhesion molecule binding
transcription coregulator activity
transcription corepressor activity
magnesium ion binding
oxidoreductase activity, acting on the CH−CH group of donors
acyl−CoA dehydrogenase activity
flavin adenine dinucleotide binding
acyl−CoA binding
electron transfer activity
protein−macromolecule adaptor activity
molecular adaptor activity
protein kinase A binding
number of genes
10
20
30
40
p.adjust
6e−04
4e−04
2e−04
NAD binding
sulfur compound binding
actin filament binding
actin binding
transmembrane transporter binding
guanyl−nucleotide exchange factor activity
protein C−terminus binding
lamin binding
nucleoside−triphosphatase regulator activity
GTPase regulator activity
RNA polymerase II−specific DNA−binding transcription factor binding
