Molecular Functions
RNA polymerase II−specific DNA−binding transcription factor binding
transcription coregulator activity
transcription regulator inhibitor activity
transcription coactivator activity
mRNA binding
ubiquitin−protein transferase inhibitor activity
ribonucleoprotein complex binding
mRNA 3'−UTR binding
ribosome binding
ubiquitin ligase inhibitor activity
mRNA 5'−UTR binding
snoRNA binding
number of genes
25
50
75
p.adjust
6e−06
4e−06
2e−06
rRNA binding
snRNP binding
protein N−terminus binding
ubiquitin−like protein ligase binding
protein folding chaperone
ubiquitin protein ligase binding
structural constituent of ribosome
unfolded protein binding
heat shock protein binding
actin binding
translation regulator activity
translation initiation factor binding
peptidyl−prolyl cis−trans isomerase activity
cyclosporin A binding
translation factor activity, RNA binding
translation initiation factor activity
cis−trans isomerase activity
translation regulator activity, nucleic acid binding
