Molecular Functions
structural constituent of ribosome
primary active transmembrane transporter activity
oxidoreduction−driven active transmembrane transporter activity
rRNA binding
proton transmembrane transporter activity
cytochrome−c oxidase activity
oxidoreductase activity, acting on a heme group of donors
electron transfer activity
ubiquitin−like protein ligase binding
ubiquitin ligase inhibitor activity
ubiquitin−protein transferase inhibitor activity
ubiquitin protein ligase binding
active transmembrane transporter activity
active ion transmembrane transporter activity
mRNA binding
monosaccharide binding
ribonucleoprotein complex binding
transcription regulator inhibitor activity
actin monomer binding
ATPase−coupled cation transmembrane transporter activity
