Molecular Functions
cell adhesion molecule binding
actin binding
electron transfer activity
structural constituent of cytoskeleton
transmembrane transporter binding
GTPase binding
NADH dehydrogenase activity
oxidoreduction−driven active transmembrane transporter activity
actin filament binding
NAD binding
glycosaminoglycan binding
sulfur compound binding
small GTPase binding
integrin binding
myosin binding
structural constituent of muscle
NADH dehydrogenase (ubiquinone) activity
NADH dehydrogenase (quinone) activity
heparin binding
ankyrin binding
