Molecular Functions
mRNA 3'−UTR binding
mRNA binding
tubulin binding
microtubule binding
histone binding
ubiquitin−protein transferase activity
ubiquitin−like protein transferase activity
SMAD binding
nucleoside−triphosphatase regulator activity
cell adhesion molecule binding
GTPase regulator activity
transcription corepressor activity
transcription coregulator activity
transcription coactivator activity
phospholipid binding
transmembrane transporter binding
actin binding
actin filament binding
RNA polymerase II−specific DNA−binding transcription factor binding
nuclear receptor binding
protein−macromolecule adaptor activity
protein serine/threonine kinase activity
molecular adaptor activity
ATP−dependent activity, acting on DNA
ubiquitin protein ligase binding
ubiquitin−like protein ligase binding
protein C−terminus binding
small GTPase binding
structural constituent of cytoskeleton
GTPase binding
