Molecular Functions
structural constituent of ribosome
transcription coregulator activity
GTPase regulator activity
nucleoside−triphosphatase regulator activity
unfolded protein binding
actin binding
snoRNA binding
ribonucleoprotein complex binding
protein phosphatase binding
ubiquitin protein ligase binding
RNA polymerase II−specific DNA−binding transcription factor binding
ubiquitin−like protein ligase binding
phosphatase binding
mRNA binding
magnesium ion binding
transcription coactivator activity
single−stranded DNA binding
heat shock protein binding
GTPase binding
translation regulator activity, nucleic acid binding
