Molecular Functions
actin binding
GTPase binding
transcription coregulator activity
protein C−terminus binding
cell adhesion molecule binding
electron transfer activity
molecular adaptor activity
transmembrane transporter binding
small GTPase binding
oxidoreductase activity, acting on the CH−CH group of donors
guanyl−nucleotide exchange factor activity
actin filament binding
protein kinase A binding
NADH dehydrogenase activity
RNA polymerase II−specific DNA−binding transcription factor binding
2−oxoglutarate−dependent dioxygenase activity
scaffold protein binding
histone demethylase activity
protein demethylase activity
microtubule binding
