Molecular Functions
transcription coactivator activity
transcription coregulator activity
ribosome binding
ribonucleoprotein complex binding
ubiquitin−protein transferase activity
ubiquitin−like protein ligase activity
ubiquitin−like protein transferase activity
ATP hydrolysis activity
GTPase regulator activity
nucleoside−triphosphatase regulator activity
histone binding
small GTPase binding
GTPase binding
protein phosphatase binding
phosphatase binding
protein tag
number of genes
10
20

p.adjust
6e−04
4e−04
2e−04
nucleosome binding
protein C−terminus binding
protein heterodimerization activity
structural constituent of ribosome
RNA polymerase II−specific DNA−binding transcription factor binding
protein N−terminus binding
GTP binding
guanyl nucleotide binding
guanyl ribonucleotide binding
mRNA binding
ubiquitin protein ligase binding
ubiquitin−like protein ligase binding
actin filament binding
actin binding
