Molecular Functions
structural constituent of ribosome
rRNA binding
proton transmembrane transporter activity
oxidoreduction−driven active transmembrane transporter activity
primary active transmembrane transporter activity
electron transfer activity
cytochrome−c oxidase activity
oxidoreductase activity, acting on a heme group of donors
ribonucleoprotein complex binding
unfolded protein binding
ubiquitin ligase inhibitor activity
proton−transporting ATP synthase activity, rotational mechanism
ubiquitin−protein transferase inhibitor activity
active transmembrane transporter activity
proton channel activity
snRNP binding
active ion transmembrane transporter activity
ubiquitin−like protein ligase binding
ubiquitin protein ligase binding
mRNA binding
