Molecular Functions
transmembrane transporter binding
NADH dehydrogenase (ubiquinone) activity
electron transfer activity
NADH dehydrogenase activity
oxidoreductase activity, acting on the CH−CH group of donors
flavin adenine dinucleotide binding
fatty acid derivative binding
acyl−CoA dehydrogenase activity
sulfur compound binding
fatty−acyl−CoA binding
acyl−CoA binding
protein−macromolecule adaptor activity
molecular adaptor activity
GTPase binding
small GTPase binding
number of genes

0.001
chaperone binding
lamin binding
transcription coactivator activity
transcription coregulator activity
integrin binding
cell adhesion molecule binding
tubulin binding
microtubule binding
magnesium ion binding
actin filament binding
actin binding
protein kinase A binding
NAD binding
structural constituent of muscle
phospholipid binding
