Molecular Functions
actin binding
molecular adaptor activity
transcription coregulator activity
phospholipid binding
sulfur compound binding
GTPase binding
oxidoreductase activity, acting on the CH−CH group of donors
flavin adenine dinucleotide binding
RNA polymerase II−specific DNA−binding transcription factor binding
small GTPase binding
microtubule binding
protein C−terminus binding
actin filament binding
tubulin binding
protein−macromolecule adaptor activity
acyl−CoA dehydrogenase activity
magnesium ion binding
phosphatidylinositol binding
NAD binding
cell adhesion molecule binding
