Molecular Functions
acyl−CoA dehydrogenase activity
actin binding
NAD binding
transcription coregulator activity
electron transfer activity
molecular adaptor activity
actin filament binding
sulfur compound binding
cell adhesion molecule binding
lamin binding
phospholipid binding
transmembrane transporter binding
oxidoreductase activity, acting on the CH−CH group of donors
protein−macromolecule adaptor activity
protein kinase A binding
flavin adenine dinucleotide binding
GTPase binding
transcription coactivator activity
NADH dehydrogenase activity
integrin binding
