Molecular Functions
translation regulator activity, nucleic acid binding
translation regulator activity
translation factor activity, RNA binding
GTPase regulator activity
GTPase activator activity
nucleoside−triphosphatase regulator activity
nuclear receptor binding
transcription coactivator activity
structural constituent of ribosome
RNA polymerase II−specific DNA−binding transcription factor binding
unfolded protein binding
transcription coregulator activity
guanyl nucleotide binding
snoRNA binding
GTP binding
mRNA binding
phosphatase binding
protein phosphatase binding
rRNA binding
heat shock protein binding
actin binding
single−stranded DNA binding
magnesium ion binding
ribonucleoprotein complex binding
SMAD binding
protein−macromolecule adaptor activity
ubiquitin protein ligase binding
molecular adaptor activity
GTPase binding
ubiquitin−like protein ligase binding
