Molecular Functions
structural constituent of ribosome
proton transmembrane transporter activity
oxidoreduction−driven active transmembrane transporter activity
electron transfer activity
primary active transmembrane transporter activity
rRNA binding
cytochrome−c oxidase activity
oxidoreductase activity, acting on a heme group of donors
active ion transmembrane transporter activity
ubiquitin ligase inhibitor activity
ubiquitin−protein transferase inhibitor activity
proton−transporting ATP synthase activity, rotational mechanism
active transmembrane transporter activity
proton channel activity
ubiquitin−protein transferase regulator activity
ribonucleoprotein complex binding
structural constituent of muscle
mRNA binding
isomerase activity
mRNA 5'−UTR binding
