Molecular Functions
structural constituent of ribosome
oxidoreduction−driven active transmembrane transporter activity
primary active transmembrane transporter activity
cytochrome−c oxidase activity
proton transmembrane transporter activity
oxidoreductase activity, acting on a heme group of donors
electron transfer activity
rRNA binding
ubiquitin ligase inhibitor activity
ubiquitin−protein transferase inhibitor activity
ubiquitin−like protein ligase binding
monosaccharide binding
active ion transmembrane transporter activity
ubiquitin protein ligase binding
active transmembrane transporter activity
transcription regulator inhibitor activity
mRNA 5'−UTR binding
ubiquitin−protein transferase regulator activity
actin monomer binding
molecular function inhibitor activity
