Molecular Functions
translation regulator activity, nucleic acid binding
translation factor activity, RNA binding
ubiquitin−like protein ligase binding
translation regulator activity
ubiquitin protein ligase binding
disordered domain specific binding
actin monomer binding
unfolded protein binding
actin binding
ubiquitin ligase inhibitor activity
chaperone binding
structural constituent of ribosome
rRNA binding
extracellular matrix structural constituent
number of genes
10
20
30
actin filament binding
ubiquitin−protein transferase inhibitor activity
p.adjust
0.008
0.006
0.004
0.002
structural constituent of cytoskeleton
mRNA binding
mRNA 5'−UTR binding
calcium ion transmembrane transporter activity
cytochrome−c oxidase activity
oxidoreductase activity, acting on a heme group of donors
oxidoreduction−driven active transmembrane transporter activity
primary active transmembrane transporter activity
transcription regulator inhibitor activity
electron transfer activity
proton transmembrane transporter activity
proton−transporting ATP synthase activity, rotational mechanism
molecular function inhibitor activity
proton channel activity
