Molecular Functions
frizzled binding
insulin−like growth factor I binding
mRNA 5'−UTR binding
growth factor binding
electron transfer activity
cytochrome−c oxidase activity
ubiquitin ligase inhibitor activity
ubiquitin−protein transferase regulator activity
active transmembrane transporter activity
oxidoreductase activity, acting on a heme group of donors
primary active transmembrane transporter activity
ubiquitin−protein transferase inhibitor activity
oxidoreduction−driven active transmembrane transporter activity
proton transmembrane transporter activity
rRNA binding
active ion transmembrane transporter activity
ATPase−coupled cation transmembrane transporter activity

SMAD binding
type I transforming growth factor beta receptor binding
transcription regulator inhibitor activity
actin monomer binding
transforming growth factor beta receptor binding
structural constituent of ribosome
monosaccharide binding
molecular function inhibitor activity
carbohydrate binding
structural constituent of synapse
transmembrane transporter binding
minor groove of adenine−thymine−rich DNA binding
carbon−oxygen lyase activity
