Molecular Functions
structural constituent of ribosome
unfolded protein binding
ubiquitin−like protein ligase binding
ribonucleoprotein complex binding
ubiquitin protein ligase binding
translation regulator activity
translation regulator activity, nucleic acid binding
GTPase regulator activity
nucleoside−triphosphatase regulator activity
transcription coregulator activity
translation factor activity, RNA binding
mRNA binding
protein folding chaperone
snoRNA binding
single−stranded DNA binding
catalytic activity, acting on DNA
transcription coactivator activity
heat shock protein binding
protein−macromolecule adaptor activity
magnesium ion binding
